\<Recipe Site>   Due Date: 10/26/22

For this first project, we will be creating a Recipe Website. This will be a one-page website using both HTML and CSS.

Format:

- HTML file named index.html
- CSS file named style.css
- Link CSS file to HTML file
- All style will be written in the external CSS File

Instructions:

1. Create a page for your favorite recipe
2. I want you to use detail for this. Add text that pertains to the recipe. Not filler text.
3. There should be a section for a description/introduction of your recipe, a section for the ingredients needed, and a section for the instructions for making your recipe.

Elements that need to be included:

- Headings of different sizes
- Paragraph tags with text
- Both ordered and unordered lists
- I want at least 4 images on your site
  - 2 images should be stored locally on your device
  - 2 images should be linked online
- Use all the CSS style properties we have discussed to style your website how you want.
  - Background color
  - Text color
  - Height and width
  - Text align
  - Google Fonts
